

\wedge	<code>/\</code> or <code>\land</code>	and, conjunction
\vee	<code>\/</code> or <code>\lor</code>	or, disjunction
\neg	<code>or \lnot</code> or <code>\neg</code>	not
\in	<code>\in</code>	in
\notin	<code>\notin</code>	not in
$\langle x, y \rangle$	<code><< x, y>></code>	a tuple containing some x, y
$<$	<code><</code>	less than
\leq	<code>\leq</code> or <code>=<</code>	less than or equal
\ll	<code>\ll</code>	much less?
\equiv	<code><=></code> or <code>\equiv</code>	is equivalent to
$>$	<code>></code>	greater
\geq	<code>\geq</code> or <code>>=</code>	greater or equal
\gg	<code>\gg</code>	much greater?
\prec	<code>\prec</code>	precedes
\preceq	<code>\preceq</code>	precedes or equals
\succ	<code>\succ</code>	succeeds
\succeq	<code>\succeq</code>	succeeds or equals
\subset	<code>\subset</code>	subset
\subseteq	<code>\subseteq</code>	subset or equal
\sqsubset	<code>\sqsubset</code>	bag subset/is a refinement?
\sqsubseteq	<code>\sqsubseteq</code>	bag subset or equal/is a refinement or equal?
$A \vdash B$	<code> -</code>	B can be derived from A?
$[S \rightarrow T]$	<code>[S -> T]</code>	set of functions
\rightarrow	<code>-></code>	step
\cap	<code>\cap</code> or <code>\intersect</code>	intersection
\sqcap	<code>\sqcap</code>	
\oplus	<code>(+)</code> or <code>\oplus</code>	bag union
\ominus	<code>(-)</code> or <code>\ominus</code>	bag difference
\odot	<code>(.)</code> or <code>\odot</code>	
\otimes	<code>(\X)</code> <code>\otimes</code>	Cartesian product
\oslash	<code>(/)</code> or <code>\oslash</code>	
\exists	<code>\E</code>	there exists
$\exists!$	<code>\exists!</code>	there exists exactly one
\exists	<code>\EE</code>	temporal existential quantification, 'hiding'
$f[e]$	<code>f[e]</code>	function application
$[A]_v$	<code>[A]_v</code>	action operator, 'square A sub v', A happens or v is unchanged, equiv to $[A \ v' = v]$
WF_v	<code>WF_v</code>	weak fairness variables
SF_v	<code>SF_v</code>	strong fairness variables
\supseteq	<code>\supseteq</code>	superset
\supset	<code>\supset</code>	superset or equals
\sqsupset	<code>\sqsupset</code>	bag superset
\sqsupseteq	<code>\sqsupseteq</code>	bag superset or equal
\vdash	<code>- </code>	
\models	<code> =</code>	models/satisfies a temporal formula
\leftarrow	<code><-</code>	substitution
\cup	<code>\cup</code> or <code>\union</code>	union
\sqcup	<code>\sqcup</code>	
\uplus	<code>\uplus</code>	
\times	<code>\X</code> or <code>\times</code>	multiply
\wr	<code>\wr</code>	
\propto	<code>\propto</code>	propositional something?

\forall	$\backslash A$	for all
\mathbf{V}	$\backslash AA$	temporal universal quantification
$\langle A \rangle_v$	$\langle\langle A \rangle\rangle_{-v}$	action operator, 'angle A sub v', A happens and v changes, equiv to $[A / v] \#$
\Rightarrow	\Rightarrow	implies
\triangleq	\equiv	is equivalent
\neq	$\backslash \text{neq or } \#$	not equal
\square	\square	always in the future/henceforth
\diamond	$\langle \rangle$	sometime(s) in the future/eventually
\leadsto	$>$	leads to
$E \triangleright M$	$-+->$	E guarantees M: M remains true at least one step longer than E does
$[h_1 > e_1, \dots, h_n \mapsto e_n]$	$[h_{-1} \vdash e_{-1}, \dots, h_{-n} \vdash e_{-n}]$	function/record constructor
$[x \in S \mid - > e]$	$[x \backslash \text{in } S \vdash e]$	function constructor
$[h_1 : S_1, \dots, h_n : S_n]$	$[h_1: s_1, \dots, h_n: s_n]$	set of records
e_1, \dots, e_n	e_1, \dots, e_n	empty set
$x \in S : p$	$x \backslash \text{in } S : p$	set
$e : x \in S$	$e: x \backslash \text{in } S$	set constructor
\div	$\backslash \text{div}$	set constructor
\cdot	$\backslash \text{cdot}$	integer division
\circ	$\backslash \text{o or } \backslash \text{circ}$	composition of actions
\bullet	$\backslash \text{doteq}$	concatenate sequences
\star	$\backslash \text{star}$	
\bigcirc	$\backslash \text{bigcirc}$	
\simeq	$\backslash \text{sim}$	stuttering equivalent
\asymp	$\backslash \text{asympt}$	
\approx	$\backslash \text{approx}$	
\cong	$\backslash \text{cong}$	
\doteq	$\backslash \text{doteq}$	
x^y	x^y	exponentiation
$'$	$'$	prime
\sim	$\backslash \text{sim}$	stuttering equivalent
$!$	$!$	new record (in EXCEPT expression)
$@$	$@$	previous record field value (in EXCEPT expression)
$:>$	$:>$	One key-value mapping in a function (TLC module)
$@@$	$@@$	Function composition (TLC module)
α	$\backslash \text{alpha}$	alpha
β	$\backslash \text{beta}$	beta
γ	$\backslash \text{gamma}$	gamma
Γ	$\backslash \text{Gamma}$	Gamma
δ	$\backslash \text{delta}$	delta
Δ	$\backslash \text{Delta}$	Delta
ϵ	$\backslash \text{epsilon}$	epsilon
ε	$\backslash \text{varepsilon}$	variant epsilon
ζ	$\backslash \text{zeta}$	zeta
η	$\backslash \text{eta}$	eta
θ	$\backslash \text{theta}$	theta
ϑ	$\backslash \text{vartheta}$	variant theta
Θ	$\backslash \text{Theta}$	Theta
ι	$\backslash \text{iota}$	iota
κ	$\backslash \text{kappa}$	kappa

λ	<code>\lambda</code>	lambda
Λ	<code>\Lambda</code>	Lambda
μ	<code>\mu</code>	mu
ν	<code>\nu</code>	nu
o	<code>o</code>	omicron
π	<code>\pi</code>	pi
Π	<code>\Pi</code>	Pi
ρ	<code>\rho</code>	rho
ϱ	<code>\varrho</code>	variant rho
σ	<code>\sigma</code>	sigma
ς	<code>\varsigma</code>	variant sigma
Σ	<code>\Sigma</code>	Sigma
τ	<code>\tau</code>	tau
υ	<code>\upsilon</code>	upsilon
Υ	<code>\Upsilon</code>	Upsilon
ϕ	<code>\phi</code>	phi
φ	<code>\varphi</code>	variant phi
Φ	<code>\Phi</code>	Phi
χ	<code>\chi</code>	chi
ψ	<code>\psi</code>	psi
Ψ	<code>\Psi</code>	Psi
ω	<code>\omega</code>	omega
Ω	<code>\Omega</code>	Omega
∂	<code>\partial</code>	partial
